WHY DO I NEED IT?

When your alarm system is activated, it alerts our monitoring center over the telephone lines.

Phone lines are subject to many types of failure:

- Intentional Line Cuts
- Floods and Storms
- Maintenance Problems
- Vandalism and Accidents
- Black outs

These problems can disrupt communication between your alarm system and our monitoring center. This means that the fire, burglary or panic singles might not get through.

WE HAVE AN ALTERNATIVE TO THE WEAKEST, MOST VULNERABLE ELEMENT OF YOUR ALARM SYSTEM —THE TELEPHONE LINE.

WHAT IS IT?

SecurePATH Wireless is our state-of-the-art radio network that provides instant communication between your home or business and our monitoring center.

The system is so sophisticated that our network actually monitors your radio to make sure it is reporting properly and on schedule.

So, even with a phone line failure, your alarm system continues to transmit information without missing a beat.

DO I NEED TO REPLACE MY CURRENT SYSTEM?

SecurePATH Wireless transmitter works with your current system, and can be easily and quickly integrated. Because of this, the service is very affordable.

SecurePATH

VoIP/Cable Telephone Solution

Are you thinking about switching or have you already switched your phone service to VoIP/Cable Telephone service? The cable carriers are reluctant to tell you but their Voice over IP phone service was not designed to work with your Fire or Security system. SecurePATH is the answer. All of your alarm signals will be sent over our network via the SecurePATH radio transmitter.

WHO NEEDS SecurePATH WIRELESS? YOU!

SecurePATH Wireless is simply one service you should not be without.
